

MiniBazar (a fictional Grocery Platform) is a platform in which people can buy groceries.

Create a Login Page

Users can login using email and password or Mobile OTP(Preferred).

You need to use firebase authentication for this.

Dummy Products Data Model

Make some dummy data for about 10 grocery products with the following fields

- Product Name
- Product Photo
- Rate
- Quantity - initially 10

Home Page

In the Home page the products are displayed which are stored in Firebase Firestore and are displayed as a list.

Each product has an Add Button with which they can add that product to cart.

In the AppBar you must be showing a Cart icon which has a badge showing the number of products added to the cart.

We can navigate to the Cart Page from the home page App Bar on tap of the Cart Icon.

Create a Cart Page

In this page you must display the products added in the Cart and totals amount in the Bottom of the Screen.

Quantity should be increased and reduced by using +/- toggle buttons for each product

There should be a Buy Button on tap of which the respective quantities must be reduced for each product from the data stored in Firebase.

Please email the duration and date of your submission. (Ideally, this task can be completed in 2-4 days)
